Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, drawn to a "coin", classified in class 235, subclass 487.
 - II. Claims 7-10, drawn to an optical sensor/reader, classified in class 235, subclass 457.
 - III. Claims 11-15, drawn to a method of etching a substrate, classified in class 216, subclass 65.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as a sensor/reader for an optical identification card. See MPEP § 806.05(d).
3. Inventions I and III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the invention of I could be made by using an alternate etching means, such as a chemical, and the invention of claim III could be used to produce an alternate optical record, such as an identification card.
4. Inventions II and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as etching a code on an identification card. See MPEP § 806.05(d).

Art Unit: 2876

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
6. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, the search for Group I is not required for Group III and the search for Group II is not required for Group III, restriction for examination purposes as indicated is proper.
7. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.
8. Claims 5 and 6 are currently improperly multiple dependent as a multiple dependent claim cannot depend from another multiple dependent claim, and would thus be objected to if Group I.
9. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
